Vaccine Adjuvants
Aluminum Hydroxide Gels For Animal Health

www.spipharma.com
An adjuvant is a substance that enhances and helps the ability of an antigen to stimulate the immune system. Alone, an antigen does not stimulate a significant response. Less vaccine antigen (inactive bacteria, virus or toxin) is needed when paired with the right adjuvant.

SPI Pharma's adjuvants enable vaccines to help eradicate disease, secure food supply, reduce the threat of disease transmission, and/or improve the health of livestock and pets.

SPI Pharma's technology is built on highly engineered pseudo-Boehmite. This proven technology can adsorb a large range of proteins and inactivated bacteria/viruses. At pH preparation of vaccines around 5-7, pseudo-Boehmite gels have the property to:

- Absorb negatively charged antigens
- Slow the release of an inactivated virus or bacteria
- Activate and stimulate the immune response
- Create a more rapid development of high titered and long-lasting antibody responses after primary immunization

Reliable Supply

SPI Pharma has served the industry for decades, supplying major vaccine producers with continuous process improvement and innovation (VAC high adsorption), technical support, willingness to optimize and work with customers.

Track Record

SPI Pharma has extensive experience and knowledge of aluminum hydroxide chemistry, with more than 70 years for antacid forms and more than 20 years for VAC gels as a vaccine adjuvant. This expertise makes a difference in terms of consistency throughout our products with respect to compliance, morphology, particle size distribution, and protein adsorption capacity.

Quality

Manufactured under Excipient GMP conditions. All grades comply with Ph. Eur. Monograph for “Aluminum Hydroxide, hydrated, for adsorption”.

Innovation

VAC 20HA is a high adsorption grade. It reduces redness and swelling at the injection site.

Animal vaccines

Highly contagious diseases:

- Foot and Mouth Disease
- Classical Swine Fever
- Aujeszky’s Disease (Pseudorabies)
- Infectious Bovine Rhinotracheitis (IBR)
- Avian influenza

Multiple species diseases:

- Anthrax
- Aujeszky’s disease
- Bluetongue
- Brucellosis (Brucella abortus)
- Leptospirosis
- Paratuberculosis
- Q fever
- Rabies
- Rinderpest
- West Nile fever
